

Accreditation of SARS-CoV-2, COVID-19, tests in Denmark

In Denmark, accredited SARS-CoV-2 analyses of human samples are performed by laboratories accredited to either ISO 15189 or ISO/IEC 17025 standards.

A list of laboratories accredited to perform the analysis can be found on the homepage of the Danish Accreditation Fund, DANAK.

Both standards are internationally recognized by the international organization for accreditation bodies, ILAC, for testing of human samples.

DANAK therefore recognizes that Covid-19 test results provided by ISO/IEC 17025 accredited laboratories are fully equivalent to those provided by ISO 15189 accredited laboratories.
